

## Number – LCM/HCF

1	HCF	<p>Factors of 48</p> <table border="1" style="width: 100%; text-align: center;"> <tr><td>1</td><td>2</td><td>3</td><td>4</td><td>6</td><td>8</td><td>12</td><td>16</td><td>24</td><td>48</td></tr> </table> <p>Factors of 30</p> <table border="1" style="width: 100%; text-align: center;"> <tr><td>1</td><td>2</td><td>3</td><td>5</td><td>6</td><td>10</td><td>15</td><td>30</td></tr> </table>	1	2	3	4	6	8	12	16	24	48	1	2	3	5	6	10	15	30	The HCF is 6
1	2	3	4	6	8	12	16	24	48												
1	2	3	5	6	10	15	30														
2	LCM	<p>Multiples of 3</p> <table border="1" style="width: 100%; text-align: center;"> <tr><td>3</td><td>...</td><td>18</td><td>21</td><td>24</td><td>...</td><td>39</td><td>42</td></tr> </table> <p>Multiples of 7</p> <table border="1" style="width: 100%; text-align: center;"> <tr><td>7</td><td>14</td><td>21</td><td>28</td><td>35</td><td>42</td></tr> </table>	3	...	18	21	24	...	39	42	7	14	21	28	35	42	The LCM is 21				
3	...	18	21	24	...	39	42														
7	14	21	28	35	42																

## Key Vocabulary

1	Integer	A <b>whole number</b> that can be positive, negative or zero.
2	Factor	A number that <b>divides exactly</b> into another number without a remainder.
3	Multiple	The result of multiplying a number by an integer.
4	Expand	To expand a bracket, <b>multiply</b> each term <b>in the bracket</b> by the expression <b>outside</b> the bracket.
5	Factorise	The <b>reverse</b> of <b>expanding</b> . Factorising is writing an expression as a product of terms by <b>'taking out'</b> a <b>common factor</b> .

## Algebra – Working with symbols

1	Expand and Simplify	<p>Expand and simplify:</p> $2(4a + 2b) - 2(a + 3b)$ $8a + 4b - 2a - 6b$ $6a - 2b$
2	Expand double brackets	<p>Multiply each term in the second bracket by each term in the first.</p> $(x + 7)(x + 2) = x^2 + 9x + 14$
3	Factorise	<p>The <b>reverse</b> of <b>expanding</b>. Factorising is writing an expression as a product of terms by <b>'taking out'</b> a <b>common factor</b>.</p> <p><math>6x - 15 = 3(2x - 5)</math>, where 3 is the common factor.</p>

## Ratio, Proportion and Rates of Change - Ratio

1	Ratio	<p>Simplify 60 : 40 : 100</p> <p style="text-align: center;"><math>\div 20</math></p> <p style="text-align: center;">6 : 4 : 10</p> <p style="text-align: center;"><math>\div 2</math></p> <p style="text-align: center;">3 : 2 : 5</p> <p>This could have been done in one step by dividing by 20.</p>	<p>Write 2: 5 in the form 1 : n</p> <p style="text-align: center;"><math>\div 2</math></p> <p style="text-align: center;">2 : 5</p> <p style="text-align: center;">1 : 2.5</p>																										
		<p>Share £45 in the ratio 2 : 7</p> <p style="text-align: center;"><math>45 \div 9 = 5</math></p> <p style="text-align: center;">£10 : £35</p> <table style="margin-left: auto; margin-right: auto;"> <tr><td>2</td><td>7</td></tr> <tr><td>5</td><td>5</td></tr> <tr><td>5</td><td>5</td></tr> <tr><td>=10</td><td>5</td></tr> <tr><td>5</td><td>5</td></tr> <tr><td>5</td><td>5</td></tr> <tr><td>=35</td><td></td></tr> </table>	2	7	5	5	5	5	=10	5	5	5	5	5	=35		<p>Joy and Martin share money in the ratio 2 : 5. Martin gets £18 more than Joy. How much do they each get?</p> <p style="text-align: center;"><math>18 \div 3 = 6</math></p> <p style="text-align: center;">£12 : £30</p> <table style="margin-left: auto; margin-right: auto;"> <tr><td>2</td><td>5</td></tr> <tr><td>6</td><td>6</td></tr> <tr><td>6</td><td>6</td></tr> <tr><td>6</td><td>6</td></tr> <tr><td>6</td><td>6</td></tr> <tr><td>=12</td><td>=30</td></tr> </table>	2	5	6	6	6	6	6	6	6	6	=12	=30
2	7																												
5	5																												
5	5																												
=10	5																												
5	5																												
5	5																												
=35																													
2	5																												
6	6																												
6	6																												
6	6																												
6	6																												
=12	=30																												

## Algebra – Sequences

<b>1</b>	Nth term	
<b>2</b>	Special Sequences	

## Algebra – Equations

<b>1</b>	<p><b>EXAMPLE:</b> Solve <math>5x + 4 = 8x - 5</math></p>
	<p><b>EXAMPLE:</b> Solve <math>3(3x - 2) = 5x + 10</math></p>

## Key Vocabulary

<b>1</b>	Geometric Sequence	In a <b>Geometric Sequence</b> each term is found by <b>multiplying</b> the previous term by a <b>constant</b> .
<b>2</b>	Estimate	To find a value that is close enough to the right answer, usually with some thought or calculation involved.
<b>3</b>	Surd	When we can't simplify a number to remove a square root (or cube root etc) then it is a <b>surd</b> . Example: $\sqrt{2}$ (square root of 2) can't be simplified further so it is a <b>surd</b> .

## Number – Rounding and estimating

<b>1</b>	Rounding	
<b>2</b>	Estimating	<p><b>EXAMPLE:</b> Estimate the value of <math>\frac{127.8 + 41.9}{56.5 \times 3.2}</math>, showing all your working.</p> <p>1) Round all the numbers to <b>easier ones</b> — 1 or 2 sf usually does the trick. <math>\frac{127.8 + 41.9}{56.5 \times 3.2} \approx \frac{130 + 40}{60 \times 3}</math></p> <p>2) You can <b>round again</b> to make later steps easier if you need to. <math>= \frac{170}{180} \approx 1</math></p>

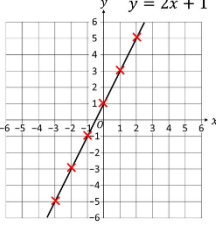

## Number – surds

<b>1</b>	Simplifying Surds	<ol style="list-style-type: none"> <li><b>1</b> <math>\sqrt{a} \times \sqrt{b} = \sqrt{a \times b}</math> e.g. <math>\sqrt{2} \times \sqrt{3} = \sqrt{2 \times 3} = \sqrt{6}</math> — also <math>(\sqrt{b})^2 = \sqrt{b} \times \sqrt{b} = \sqrt{b \times b}</math></li> <li><b>2</b> <math>\frac{\sqrt{a}}{\sqrt{b}} = \sqrt{\frac{a}{b}}</math> e.g. <math>\frac{\sqrt{8}}{\sqrt{2}} = \sqrt{\frac{8}{2}} = \sqrt{4} = 2</math></li> <li><b>3</b> <math>\sqrt{a} + \sqrt{b}</math> — <b>DO NOTHING</b> — in other words it is definitely <b>NOT</b> <math>\sqrt{a + b}</math></li> <li><b>4</b> <math>(a + \sqrt{b})^2 = (a + \sqrt{b})(a + \sqrt{b}) = a^2 + 2a\sqrt{b} + b</math> — <b>NOT</b> just <math>a^2 + (\sqrt{b})^2</math> (see p.18)</li> <li><b>5</b> <math>(a + \sqrt{b})(a - \sqrt{b}) = a^2 + a\sqrt{b} - a\sqrt{b} - (\sqrt{b})^2 = a^2 - b</math> (see p.19).</li> </ol>
<b>2</b>	Expanding with surds	

**Probability**

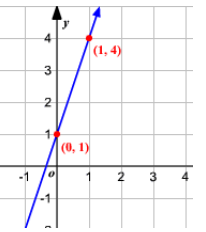

1	Calculating Probability	$\frac{\text{number of } \textit{successful} \text{ outcomes}}{\text{number of } \textit{possible} \text{ outcomes}}$																		
2	Relative Frequency • $\frac{\textit{Frequency}}{\textit{Total}}$	<table border="1"> <thead> <tr> <th>Color</th> <th>Frequency</th> <th>Relative Frequency</th> </tr> </thead> <tbody> <tr> <td>Purple</td> <td>7</td> <td>7/20= 35%</td> </tr> <tr> <td>Blue</td> <td>3</td> <td>3/20= 15%</td> </tr> <tr> <td>Pink</td> <td>5</td> <td>5/20=25%</td> </tr> <tr> <td>Orange</td> <td>5</td> <td>5/20=25%</td> </tr> <tr> <td>Total</td> <td>20</td> <td>20/20 = 100%</td> </tr> </tbody> </table>	Color	Frequency	Relative Frequency	Purple	7	7/20= 35%	Blue	3	3/20= 15%	Pink	5	5/20=25%	Orange	5	5/20=25%	Total	20	20/20 = 100%
Color	Frequency	Relative Frequency																		
Purple	7	7/20= 35%																		
Blue	3	3/20= 15%																		
Pink	5	5/20=25%																		
Orange	5	5/20=25%																		
Total	20	20/20 = 100%																		

**Algebra – Linear Graphs**

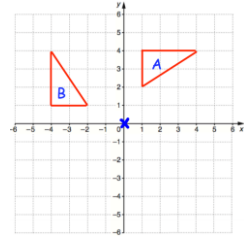

1	Plotting a linear graph	$y = 2x + 1$ 1) Complete a Table of Values. <table border="1"> <thead> <tr> <th>x</th> <th>-3</th> <th>-2</th> <th>-1</th> <th>0</th> <th>1</th> <th>2</th> <th>3</th> </tr> </thead> <tbody> <tr> <td>y</td> <td>-5</td> <td>-3</td> <td>-1</td> <td>1</td> <td>3</td> <td>5</td> <td>7</td> </tr> </tbody> </table> 	x	-3	-2	-1	0	1	2	3	y	-5	-3	-1	1	3	5	7
x	-3	-2	-1	0	1	2	3											
y	-5	-3	-1	1	3	5	7											

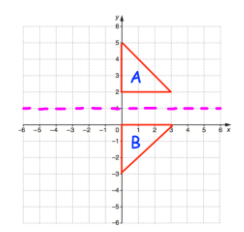

2	Equation of a line	$y = mx + c$ $m$ is gradient and $c$ is the $y$ intercept
---	--------------------	--

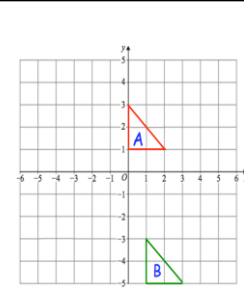

3	Finding the Gradient • $\frac{\textit{Change in } y}{\textit{Change in } x}$ • $\frac{4}{2} = 2$	
---	--	--

4	Finding the equation of a line • Gradient is 3 • Y intercept is 1 • Equation of the line: $y = 3x + 1$	
---	--	---

**Geometry and Measure - Transformations**

1	Rotation: need the degrees turned, direction (clockwise or anti-clockwise) and the <b>centre of rotation</b> .	
---	--	---

2	Reflection: need the line that the shape has been reflected in. This shape has been reflected in $y = 1$ .	
---	--	---

3	Translation: need the direction and how far the shape has travelled. Can be given as a column vector. Example: $\begin{pmatrix} 1 \\ -6 \end{pmatrix}$ This means 1 right and 6 down.	
---	---	--

4	Enlargement: the shape will get bigger or smaller. Multiply each side by the scale factor.	Scale factor 3 means '3 times larger' = multiply it by 3. Scale factor $\frac{1}{2}$ means half the size, divide by 2.
---	--	---

**Algebra - Formulae**

1	Expression, Equation, Identity, Formulae	<table border="1"> <tr> <td>An Expression</td> <td>An Equation</td> </tr> <tr> <td><math>4a + 7b</math></td> <td><math>4a + 12 = 60</math></td> </tr> <tr> <td>A Formula</td> <td>An Identity</td> </tr> <tr> <td><math>A = \pi r^2</math></td> <td><math>(a + b)^2 = a^2 + 2ab + b^2</math></td> </tr> </table>	An Expression	An Equation	$4a + 7b$	$4a + 12 = 60$	A Formula	An Identity	$A = \pi r^2$	$(a + b)^2 = a^2 + 2ab + b^2$
An Expression	An Equation									
$4a + 7b$	$4a + 12 = 60$									
A Formula	An Identity									
$A = \pi r^2$	$(a + b)^2 = a^2 + 2ab + b^2$									
2	Substitution: replacing letters with numbers	$a = 3, b = 2$ and $c = 5$ . Find: 1. $2a = 2 \times 3 = 6$ 2. $3a - 2b = 3 \times 3 - 2 \times 2 = 5$								
3	Rearranging formulae: Use inverse operations on both sides of the formula (balancing method) until you find the expression for the letter.	Make $x$ the subject of $y = \frac{2x-1}{z}$ Multiply both sides by $z$ $yz = 2x - 1$ Add 1 to both sides $yz + 1 = 2x$ Divide by 2 on both sides $\frac{yz + 1}{2} = x$ We now have $x$ as the subject.								

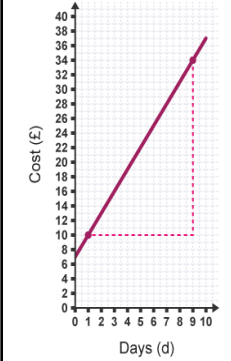

**Key Vocabulary**

1	Rotational symmetry	A shape that still looks the same after some rotation. Eg. a square has a rotational symmetry of order 4.
2	Square root	The <b>number you multiply by itself</b> to get another number.
3	Cube root	The <b>number you multiply by itself and itself again</b> to get another number.
4	Perpendicular line	A <b>line</b> meeting another at a right angle, or $90^\circ$
5	Index notation	Indices are a way of representing numbers and letters that have been multiplied by themselves a number of times.

**Number – Percentages**

1	Percentage Change	$\frac{\text{Changed by}}{\text{Original amount}} \times 100$
2	Increase or Decrease by a Percentage	Non-calculator: <b>Find the percentage</b> and <b>add</b> or <b>subtract</b> it from the <b>original</b> amount. Calculator: Find the <b>percentage multiplier</b> and multiply.
3	Reverse Percentages	Find the <b>correct percentage given in the question</b> , then work backwards to <b>find 100%</b> Look out for words like <b>'before'</b> or <b>'original'</b>

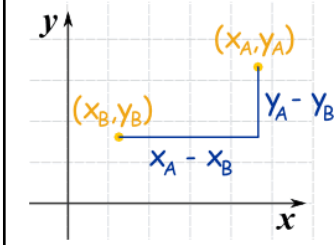

**Algebra – Real Life Graphs**

1	<p>The <b>gradient</b>, <b>y-intercept</b> and <b>area under the graph</b> might have a contextual meaning.</p> <p>Example – Graph shows cost of hiring a ladder for various number of days. The <b>gradient</b> shows the cost per day. The <b>y-intercept</b> shows the additional cost/deposit/charged.</p>	
---	--	--

**Algebra – Simultaneous Equations**

1	Solve by Substitution	Usually used for quadratic equations – Rearrange and Substitute
2	Solve by Elimination	Usually used for linear equations – same signs subtract, different signs add.
3	Solve Graphically	The solution is found at the points of intersection

**Geometry and Measures - Pythagoras**

1	Finding the hypotenuse (longest side)	$a^2 + b^2 = c^2$ $3^2 + 4^2 = 25$ $\sqrt{25} = 5$
2	Finding a shorter side	$a^2 = c^2 - b^2$
3	Find the distance between two points	 $\sqrt{(x_A - x_B)^2 + (y_A - y_B)^2}$

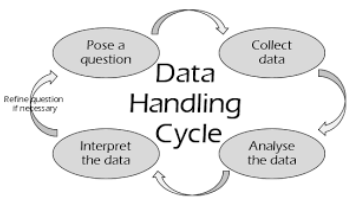

**Algebra – Inequalities**

1	Understanding inequality signs	$>$ greater than $\geq$ greater than or equal $<$ less than $\leq$ less than or equal
2	Representing inequalities on a number line	$x > 1$  $x \leq 0$ 
3	Quadratic Inequalities	<p>You should get <b>two pairs of solutions</b></p> <p>Graphically, you should have <b>two points of intersection</b></p>

**Key Vocabulary**

1	Multiplier	The decimal by which another number is multiplied
2	Factorise	The reverse of expanding brackets
3	Simultaneous	A set of two or more equations
4	Hypotenuse	The longest side of a right angle triangle

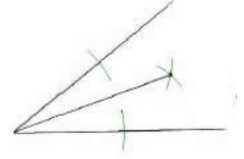

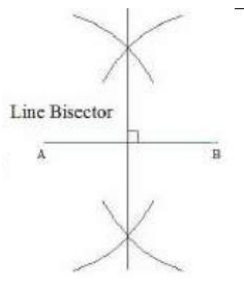

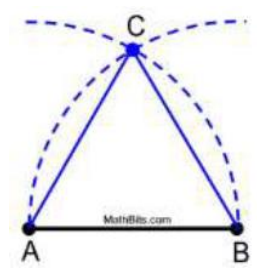

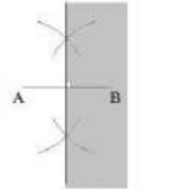

**Statistics – Collecting Data**

1	Types of Data	<p><b>Qualitative Data – non-numerical data</b></p> <p><b>Quantitative Data – numerical data</b></p>			
2	Grouped Data	<p>Data that has been <b>put in to Categories</b></p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Foot length, <math>l</math>, (cm)</th> </tr> </thead> <tbody> <tr> <td><math>10 \leq l &lt; 12</math></td> </tr> <tr> <td><math>12 \leq l &lt; 17</math></td> </tr> </tbody> </table>	Foot length, $l$ , (cm)	$10 \leq l < 12$	$12 \leq l < 17$
Foot length, $l$ , (cm)					
$10 \leq l < 12$					
$12 \leq l < 17$					
3	Data Handling Cycle				

**Number – Fractions and Decimals**

1	Mixed Number	A number formed of both an <b>integer part</b> and a <b>fraction part</b> .
2	Reciprocal	The reciprocal of a number is <b>1 divided by the number</b> . The reciprocal of $x$ is $\frac{1}{x}$
3	Recurring Decimals - $0.\dot{3}$ means 0.333333	A <b>recurring decimal</b> exists when decimal numbers repeat forever

**Geometry – Constructions and Loci**

1	Angle Bisector - Cuts the angle in half.	
2	Perpendicular Bisector - Cuts a line in half and at right angles.	<p>Line Bisector</p> 
3	Constructing an Equilateral Triangle (also makes a 60° angle)	
4	Loci and Regions - A locus is a path of points that follow a rule.	 <p>Points Closer to B than A.</p>

**Statistics – Statistical Measures**

1	Median for grouped data – add up the frequency column, add one to the total and divide by 2, this will tell you where the median value will be found	<p>Half-Way through the Frequency is <math>(18 + 1) / 2 = 9.5</math></p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Cappuccinos</th> <th><math>f</math></th> <th>Cumulative <math>f</math></th> </tr> </thead> <tbody> <tr> <td>0-3</td> <td>2</td> <td>2</td> </tr> <tr> <td>4-7</td> <td>3</td> <td>5</td> </tr> <tr> <td>8-11</td> <td>8</td> <td>13</td> </tr> <tr> <td>12-15</td> <td>3</td> <td>16</td> </tr> <tr> <td>16-19</td> <td>2</td> <td>18</td> </tr> <tr> <td><b>TOTAL</b></td> <td><b>18</b></td> <td></td> </tr> </tbody> </table> <p>The 9.5<sup>th</sup> position occurs during the 8-11 Interval. In this Interval we pass through 9.5 on the way to reaching 13.</p> <p><b>The Median Class is 8-11</b></p>	Cappuccinos	$f$	Cumulative $f$	0-3	2	2	4-7	3	5	8-11	8	13	12-15	3	16	16-19	2	18	<b>TOTAL</b>	<b>18</b>								
Cappuccinos	$f$	Cumulative $f$																												
0-3	2	2																												
4-7	3	5																												
8-11	8	13																												
12-15	3	16																												
16-19	2	18																												
<b>TOTAL</b>	<b>18</b>																													
2	Mean for grouped data – find the midpoint of the data multiply it by the frequency.	<table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Cappuccinos</th> <th>Freq</th> <th>Interval Midpoint</th> <th>Freq x Midpt</th> </tr> </thead> <tbody> <tr> <td>0-3</td> <td>2</td> <td>1.5</td> <td><math>2 \times 1.5 = 3</math></td> </tr> <tr> <td>4-7</td> <td>3</td> <td>5.5</td> <td><math>3 \times 5.5 = 16.5</math></td> </tr> <tr> <td>8-11</td> <td>8</td> <td>9.5</td> <td><math>8 \times 9.5 = 76</math></td> </tr> <tr> <td>12-15</td> <td>3</td> <td>13.5</td> <td><math>3 \times 13.5 = 40.5</math></td> </tr> <tr> <td>16-19</td> <td>2</td> <td>17.5</td> <td><math>2 \times 17.5 = 35</math></td> </tr> <tr> <td><b>TOTALS</b></td> <td><b>18</b></td> <td></td> <td><b>171</b></td> </tr> </tbody> </table> <p><b>MEAN Average</b> = Total of (Freq x Midpt) / Total Frequency = <math>171 / 18 = 9.5</math> cappuccinos per hour</p>	Cappuccinos	Freq	Interval Midpoint	Freq x Midpt	0-3	2	1.5	$2 \times 1.5 = 3$	4-7	3	5.5	$3 \times 5.5 = 16.5$	8-11	8	9.5	$8 \times 9.5 = 76$	12-15	3	13.5	$3 \times 13.5 = 40.5$	16-19	2	17.5	$2 \times 17.5 = 35$	<b>TOTALS</b>	<b>18</b>		<b>171</b>
Cappuccinos	Freq	Interval Midpoint	Freq x Midpt																											
0-3	2	1.5	$2 \times 1.5 = 3$																											
4-7	3	5.5	$3 \times 5.5 = 16.5$																											
8-11	8	9.5	$8 \times 9.5 = 76$																											
12-15	3	13.5	$3 \times 13.5 = 40.5$																											
16-19	2	17.5	$2 \times 17.5 = 35$																											
<b>TOTALS</b>	<b>18</b>		<b>171</b>																											
4	<p><math>IQR = UQ - LQ</math></p> <p>(Interquartile range = Upper quartile – Lower Quartle)</p>	<p>UQ = 75%</p> <p>LQ = 25%</p> <p><math>IQR = Q_3 - Q_1</math></p> <p>23, 25, 28, 28, 32, 33, 35</p> <p><math>IQR = 33 - 25</math></p>																												

**Key Vocabulary**

1	Perpendicular	Two lines intersect at a right angle
3	Locus	A <b>locus</b> is a set of points satisfying a certain condition
4	Stratified Sampling	The researcher divides the population into separate groups, called strata
5	Quartiles	A <b>quartile</b> is <b>defined</b> as a group of values and/or means that divide a data set into quarters, or groups of four

**Algebra - Quadratics**

1	Quadratic	A quadratic expression is of the form $ax^2 + bx + c$ where $a$ , $b$ and $c$ are numbers
2	Factorising Quadratics	When a quadratic expression is in the form $x^2 + bx + c$ find the two numbers that add to give $b$ and multiply to give $c$ . $x^2 + 7x + 10 = (x + 5)(x + 2)$
3	Difference of Two Squares	An expression of the form $a^2 - b^2$ can be factorised to give $(a + b)(a - b)$ $x^2 - 25 = (x + 5)(x - 5)$ $16x^2 - 81 = (4x + 9)(4x - 9)$
4	Solving Quadratics by Factorising	<b>Factorise</b> the quadratic in the usual way. Solve $x^2 + 3x - 10 = 0$ <b>Solve = 0</b> Factorise: $(x + 5)(x - 2) = 0$ $x = -5$ or $x = 2$

**Statistics – Representing Data**

1	Venn Diagrams	<p> <math>A</math>      <math>B</math>      <math>A'</math> (Complement of A)  <math>B'</math> (Complement of B)      <math>A \cup B</math> (A union B)      <math>A \cap B</math> (A intersect B)         </p>
---	---------------	---

**Geometry and Measures – Trigonometry**

1	Identifying the sides	Longest side = Hypotenuse 
2	Trigonometric Formulae	Use <b>SOHCAHTOA</b> $\sin \theta = \frac{O}{H}$ $\cos \theta = \frac{A}{H}$ $\tan \theta = \frac{O}{A}$
3	Worked Example	<div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <p>Finding a side</p> <p>Use 'Opposite' and 'Adjacent', so use 'tan'</p> <math display="block">\tan 35 = \frac{x}{11}</math> <math display="block">x = 11 \tan 35 = 7.70\text{cm}</math> </div> <div style="width: 45%;"> <p>Finding an angle</p> <p>Use 'Adjacent' and 'Hypotenuse', so use 'cos'</p> <math display="block">\cos x = \frac{5}{7}</math> <math display="block">x = \cos^{-1}\left(\frac{5}{7}\right) = 44.4^\circ</math> </div> </div>

**Geometry and Measures – Circle Theorems**

Circle Theorem 1		Circle Theorem 5	
Angles in a semi-circle have a right angle at the circumference. 		A tangent is perpendicular to the radius at the point of contact. 	
Circle Theorem 2		Circle Theorem 6	
Opposite angles in a cyclic quadrilateral add up to 180°. $a+c=180^\circ$ , $b+d=180^\circ$ 		The angle at the centre is twice the angle at the circumference. 	
Circle Theorem 3		Circle Theorem 7	
Tangents from an external point at equal in length. 		<b>Alternate Segment Theorem</b> 	
Circle Theorem 4		Prove circle theorems	
Angles in the same segment are equal. 		$(180^\circ - 2w) + (180^\circ - 2y) + a = 360^\circ$ $360^\circ - 2w - 2y + a = 360^\circ$ $a - 2w - 2y = 0$ $a = 2w + 2y$ $a = 2(w + y)$ $w + y = b$ $\text{so } a = 2b$	
<b>Key Vocabulary</b>			
1	Mutually Exclusive	Two or more events are said to be <b>mutually exclusive</b> if the occurrence of any one of them <b>means</b> the others will not occur	
2	Relative Frequency	How often something happens divided by all outcomes
