	Subject: Computer Science	e	Topic: Computer Systems		Year Group: 11	enjoy leain succeed
Hardware, Operating Systems and Memory		See	Secondary Storage and Memory		y Vocabulary	
1	 What is hardware? Input Devices Output Devices Specialist Devices Assistive Technology Operating system functions Processor, memory, IO devices, applications and security Random Access Memory [RAM] Read Only Memory [ROM] The difference between RAM & ROM. Virtual Memory Preventing the need for VM Disk thrashing Flash memory 		 Common types of storage Optical Media Magnetic Hard Drive Solid State Drives Suitable storage devices / media for a given application Advantages / Disadvantages using the following characteristics: Capacity Speed Portability Reliability Cost 	1	Bus Embedded Systems	A collection of wires that carry data, instructions and addresses between components of the CPU. A computer built into another device e.g. Smart TV, dishwashers and
Boolean Logic		1	 Systems Architecture The purpose of the CPU Von Neumann architecture Common CPU components and their functions Function of the CPU as fetch decode and execute How common characteristics of CPUs 			microwaves.
	 Logic Gates AND OR NOT Truth tables Truth tables show all possible input combinations of 1s and 0s, and the corresponding outputs. Logic statements Circuits can be written as logical statements. Operations in brackets should be completed first, just like in Math's. 	3		Hardware	The physical components that make up a computer	
			affect their performance: - Embedded systems:	4	Software	The program that runs on a computer system
